

■ WAVING RIBBON ■

This project will become a kindergarten in the future, so this lively and rhythmic design is in line with the positioning of future planning, and directly enhances the quality of education from aesthetics, laying a solid foundation for future projects.

concept

Waving ribbon is applied to the interior design as the boundary.

The ribbon has two functions: decoration and boundary.

Grey and white ribbon interlaced with each other, which connects all the spaces at 1st and 2nd floors while separate and divide the space into areas.

WAVING RIBBON

■ FLOATING LIGHT BOX

We were contracted the architectural, interior and landscape design work for this case. The project is design of sales and show space, including 5 mock-up rooms and a 150m² construction technology exhibition zone. Since the surrounding condition of the site is not so good (surrounding old streets), we design the mock-up room and show space at the 2nd floor, the meeting area at the 1st floor, so that the exterior landscape pond can be viewed through the glass.

■ FLOATING LIGHT BOX

Simple and free curve lines are applied to the exterior wall design. The architecture looks like a floating light box which forms a visual focus.
