

**HIVE CITY**

The project is a future new city complex with school, hospital, shopping mall, residence and many other functions in the future. It has complete structure which is just like a hive city. Thus, sticking to the characteristics of multi-function, aggregation and precision, we hope to finish this design with the concept of hive city. In obedience to the human-oriented design concept, we blend beauty of ecology, beauty of art and beauty of architecture into the design. We also apply some creation by approach of modern geometry and sense of future.

Design of this case applies a hive structure on the ceiling as theme and a visual highlight of the space together with the lighting. Different shapes and heights on the hive structure highlights different layers of the ceiling and adds rhythms to the space.

The white geometry stairs to 2nd floor is elegant and full of sense of design. In the connection of handrail and steps, the angular geometry shapes and materials with light and shadow are applied by architectural design approach, which forms the beauty of dimensional structure. This not only puts beauty of architecture into interior space, but also forms the visual effects of time tunnel.
